SUMMARY

Software Engineer skilled in React, TypeScript, Django REST Framework, and cloud/containerized deployments via Docker. Demonstrates strong computer science fundamentals and hands-on experience delivering end-to-end SaaS platforms and RESTful web applications. Tailwind CSS, with working knowledge of REST API integration.

EDUCATION

Babu Banarasi Das Institute of Technology and Management (AKTU)

B.Tech in Computer Science Engineering (Data Science) CGPA: 7.54/10

Lucknow, Uttar Pradesh

Nov 2022 – May 2026

EXPERIENCE

Software Engineer Intern

XRG Consulting Private Limited

Hyderabad, Telangana

Sep 2025 – Nov 2025

- Built responsive UI modules for Anvayaa KinCare, a caregiver management platform, using React.js and Tailwind CSS, translating designs into reusable components.
- Integrated REST APIs with Django to fetch and manage caregiver scheduling, activity tracking, and dashboard data.
- Implemented search, filtering, pagination, and form validation across care management modules to improve usability.
- Debugged frontend issues and performed manual testing to ensure UI consistency and application quality.
- Collaborated with senior developers and QA engineers in an Agile environment, participating in sprint planning and code reviews.

PROJECTS

CoinPay | **GitHub** | *Node.js, Express.js, MongoDB, React Native, JWT, Docker, Swagger*

- Architected and developed a secure peer-to-peer digital wallet platform enabling virtual credit transfers using **Node.js**, **Express.js**, **MongoDB**, and **React Native**, implementing JWT authentication, role-based access control, QR-based payments, and persistent transaction history.
- Engineered **15+ RESTful APIs** for authentication, wallet management, and transaction processing using a modular MVC architecture with centralized middleware, request validation, bcrypt hashing, Swagger documentation, and Dockerized deployment for a scalable backend.

Cortex | **GitHub** | *JavaScript, Node.js, React, WebSocket, Docker, AI, Analytics*

- Built full-stack SaaS platform delivering real-time AI interview experiences with collaborative editor, voice pipeline, analytics, WebSocket communication, scalable deployment infrastructure.
- Engineered modular Node.js backend with WebSocket voice streaming, AI interviewer integration, RESTful APIs, authentication, containerized CI/CD, observability monitoring.
- Designed collaborative in-browser code editor with real-time synchronization, scoring analytics, event-tracking pipeline, user performance dashboards, and latency-optimized WebSocket architecture integration.

TaskFlow | **GitHub** | *React, TypeScript, Django, Django REST Framework, MongoDB, Docker, JWT*

- Engineered a full-stack task management platform utilizing **React (TypeScript)** and **Django REST Framework**, featuring dynamic Kanban boards, custom project workflows, and secure JWT-based authentication.
- Implemented role-based access control (RBAC) and optimized **RESTful APIs** for seamless CRUD operations, project analytics, and efficient data handling.
- Architected a multi-container **Docker** environment deployed via Railway and Nginx, integrating CI/CD pipelines, state management using AuthContext, and performance monitoring.

SKILLS

Languages: Python, TypeScript, JavaScript

Frontend: React.js, React Native, HTML, CSS, Tailwind CSS

Backend: Node.js, Express.js, Django, REST APIs, WebSockets, JWT Authentication, OAuth2

Databases & Tools: MongoDB, PostgreSQL, MySQL, Docker, Git, GitHub, Swagger

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks, SDLC

ACHIEVEMENTS

- Solved **500+ Data Structures & Algorithms** problems on **LeetCode**, achieving a peak contest rating of **1753**.
- **Purple Tech Hackathon 2026:** Advanced to Round 2 after clearing the initial DSA evaluation stage among **3,000+ participating teams**.
